Abstract (en)

[origin: EP0682997A1] The present invention relates to a wire transport assembly which has been specifically designed for wire bending and winding machines (1) comprising, on the machine frame (2), a wire guiding assembly (10) for supplying the wire towards the bending or winding center. The main feature of the invention is that said wire guiding assembly (10) can be turned through substantially 90 DEG about an axis which is substantially perpendicular to the axis of the wire in order to feed the wire parallel to the machine plane (3) and at 90 DEG with respect this machine plane (3). <IMAGE>
