Abstract (en)
[origin: EP0683350A1] The fixing consists of a sole plate (1) which is fixed to the tripod and has two fixing points (3), while the camera has two clips (13,15) to engage with these. Each of the fixing points consists of a locking pin, and both slide at the same time to engage with the camera clips; they are also spring-loaded. Each of the locking pins is released by a pusher (5) in the form of a spring-loaded pin which sinks into the sole plate when depressed by the action of the camera being placed on it. Centring pins (2) ensure that the camera is fitted vertically to the sole plate.
