Abstract (en)

The heating body is composed of a number of bodies, for hot water to flow through as the heating medium interconnected by upper and lower connection tubes. Each heater section has an outer mantle (1) and an inner tube (2), forming a hollow chamber for hot water. The hot water passes in through a feed (3) and out through a return (4). The air heated by convection, within the inner tube (2), rises upwards and heats the ambient air.
