Abstract (en)

The invention concerns a fire prevention device for vehicles and boats that deactivates the main uses of the electrical system in the event of impact, thus preventing the possibility of fire due to possible fuel leakage caused by operation of the fuel pump after the impact. The response of the invention is also irrespective of the direction from which the impact comes. The electrical system is brought into use again only when the user so desires, in a simple, practical manner, inside the vehicle. <IMAGE>
