Abstract (en)
[origin: WO9410894A1] In a device for a lavatory ring on a lavatory bowl, having a means for applying and displacing a protective cover on the lavatory ring, said lavatory ring (2) having a horseshoe shape with the two end legs (7, 8) thereof being inserted through respective openings (5, 6) in a housing (4) containing both a storage supply and a receiver for the protective cover, at least one of said end legs being attached in the housing, the end legs of said lavatory are hinged (9, 10) outside the respective opening, for upward swinging from the lavatory bowl. A press member (39) in the housing flattens the protective cover (41) which passes off the seat ring and over into the receiver. Between the lavatory bowl and the lavatory ring is provided a safety catch (37, 39) for the free seat and leg. The housing comprises a slide-snap mechanism (24) for engagement with two attachment members (29, 31) connected to the lavatory bowl. The protective cover has markers (22, 23) placed at intervals in the longitudinal direction thereof to indicate the length of covering to be advanced.
