Abstract (en)

A game device (10) having a game execution unit (70) for playing a game using a play medium and a play medium holding unit (32) for temporarily holding the play medium used for the game. The game device (10) includes an acceptance processing unit (11) for accepting an input operation carried out by a player for receiving lending of the play medium, and outputting data representing the number of lending of the play media; a supplementation unit (12) for supplementing the play medium to the play medium holding unit (32) in accordance with the player's request, and outputting data representing the number of supplementation of the play media; a prize output unit (71) for outputting data representing the number of the play media given as a prize to the player during the execution of the game; a number controlling unit (13) for inputting the data representing the number of lending of the play media, the data representing the number of supplementation of the play media and the data representing the number of the play media given as the prize to the player, and controlling the number of the play media kept by the player in the game device; and a calculation processing unit (14) for receiving a calculation instruction, inputting the data representing the number of the play media kept by the player and controlled by the number controlling unit (13), and recording and outputting the data representing this number in a memory medium (14).
