Abstract (en)

The two work rolls of a cluster Rolling Mill are removed together without contacting each other or their support rolls. The mill housing is in two parts and to remove the rolls the upper work roll is biased into engagement with its support rolls, the upper housing is displaced away from the lower housing, the two rolls are supported at one end in cantilever fashion, the upper work roll and the lower work roll are separated from their support rolls and are then withdrawn axially from the mill. <IMAGE>
