Abstract (en)
[origin: EP0684112A1] The work bench has an upper frame (5) borne on legs (1,2). Two plate-like jaws (8,9) are supported on opposite longitudinal spars (6) of this frame. The front one (8) can be set by two setting spindles (14) fitted in the longitudinal spars relative to the rear jaw (9). The rear jaw can be moved along the longitudinal spars, and has locking pins (32) fitting in locking holes (35) in the spars. The locking pins can be lifted out of the locking holes by operating members (37), and can be fixed in an unlocked position.
