Abstract (en)
[origin: WO9419562A1] The invention relates to a system ceiling form with ceiling supports and rectangular form components in which ceiling components are arranged to be supported on a holding device standing upright on a supporting head containing a head plate. In the invention, at least two high plate sections (5, 10) running radially inwards terminate at a distance from the vertical support axis (6) and the form surface (8) facing it runs upwards with the shape of the section tapering, and two plate sections (5, 10) lie in a perpendicular plane containing the support axis (6).
