Abstract (en)

[origin: WO9419803A1] Compact disks, which are sensitive, optically readable information storage media, may be gently taken out of transport housing having central retaining teeth by centrally pressing on the compact disk a disk-shaped base body (1) centrally provided with a stud (3) and having several suckers (2) arranged in its marginal area. The compact disk is thus loosened from its housing and adheres in a detachable manner to the device.
