Abstract (en)

The shelf has an inclined base (1) with right and left parts (G,D) which are joined by two bars (30) and a grid (20). This has front and back rails (73,61) on which separating elements (2), made of wires, slide to define a row (3) for the articles. The articles are pushed forward by an element (100), made of wires, which moves by its weight along lateral guides (89) on the separating elements. The separating elements have front wires (86,90) which form stops for the articles. The pusher has two axles which move along the guides. <IMAGE>
