Abstract (en)

The adjuster comprises an S-shaped pressure bar (2) flexing along the transverse plane. The bar end engages with the supports (3,4) and the effective spring length of the bar or its spring force is adjustable between the supports. The spring pressure bar has a semicircular or semi-elliptical curve, or is elliptical. The spring force can be adjusted by a thread (5) on the end of the bar, and a nut (6) cooperating with the thread and supported on the appropriate support. The pressure bar has shock-absorbent rubber inserts (10) between the curves. <IMAGE>

Abstract (de)

Die Vorrichtung zur Einstellung der Vorspannung eines Snowboards weist eine zwischen zwei hintereinander angeordneten Widerlagern (3,4) montierte Druckstange (2) auf, welche direkt als federnde Stange ausgebildet ist, deren Federkraft einstellbar ist. <IMAGE>
