Abstract (en)

[origin: EP0685326A1] The drainage element has at least one support element is provided for the sleeve (8) which is connected to it so that its ductility is strictly confined to an area lying in the attachment zone in relation to the remaining portion. The support element is formed as a ring with high flexural strength and is connected to the sleeve so that the internal or external diameter of the ring and sleeve coincide. The ring has a circular radial cross=section. <IMAGE>
