Abstract (en)

[origin: EP0685630A2] The double bore tube (22) comprises an outer tube (24) and an inner rod (25) with the end of a double tube rod. A beam (26) is provided which at one end has a first centering device for centering the outer tube together with centering and clamping of the end of the inner rod extending out of the outer tube. At the other end is a second centering device (37) for centering the outer tube. This has a run-in incline (43) by which the end of the inner rod can be raised, when the inner rod is pushed into the outer tube. <IMAGE>
