Abstract (en)

System of air supply duct (4) and combustion gas discharge duct (6), connected to a combustion boiler (3) of the essentially closed type, for installation in a room of a building, and for opening out into the atmosphere, in which system the ducts are in fluid communication by means of a transition part (12) with controllable shut-off element (13) if the shut-off element is in the open position, which shut-off element is controlled between the open and the closed position depending on the pressure prevailing in the air supply duct. <IMAGE>
