Abstract (en)
[origin: EP0686419A2] The present invention relates to a feed apparatus for a disc filter by means of which a fibre suspension of the wood processing industry or another such liquid suspension that needs to be filtered is fed to the vat of a disc-type filter. In order to avoid foaming of the liquid suspension, the above-mentioned feed apparatus comprises a feed chute (36) located in at least each space between the discs (14), the upper edge of the chute (36) being advantageously provided with openings (42, 44). <IMAGE>
