Abstract (en)

[origin: EP0686436A1] The device consists of at least one round-grain cylindrical separator (10) and one long-grain cylindrical separator (11). It also comprises a pre-sorting device relative to the flow direction of the grains. The pre-sorting device is a disc separator (12). The device has an additional round-grain cylindrical gleaning separator (14). The round-grain separator, gleaning separator and the long-grain separator are connected in parallel with each other or in series behind the disc separator. <IMAGE>
