Abstract (en)

[origin: EP0686463A1] The device has at least two working drums with radial take up sections. The take up sections are separated by sections of the drum wall and have controllable clamp mechanisms mounted in them. The first drum has a horizontal axis of rotation and has open sections on at least one end. Each of these open sections has a blade which works together with a fixed blade. The second drum has a similar arrangement to process a second edge of the flat material. A conveyor belt is arranged between the two drums to transport the cut material to the other drum.
