Abstract (en)

[origin: EP0686567A2] A container made from a laminated material consisting of a central layer (5) and facing layers (4, 8) on both sides has a potential or resealable opening. The opening comprises a larger, first opening in the central layer (5) and a coincidental smaller, second opening or potential opening in the facing layers (4, 8) which cover the edge of the first opening and adhere together inside the opening. The mfr. of the container is also claimed where a first hole is punched in the centre layer (5), facing layers (4, 8) are laminated on both sides and a second smaller opening or potential opening is created in the facing layers (4, 8) in the area of the first opening. <IMAGE>
