Abstract (en)

[origin: EP0686568A2] A container, esp. for liquids, with an opening point in the wall for the insertion of a closure uses a closure with two separate inner holding sections (22, 26). They are located at opposite sides of the pouring opening for the hinge (11) at one side and the opening lip (12) at the other side. Also claimed is a container mfg. process where an opening is punched in the laminated container material through the centre layer to be covered by the lamination, together with a second smaller hole which can be pierced or reclosed. Pref. the container is formed of a laminated material with a centre cardboard layer and outer layers of polyethylene. <IMAGE>
