Abstract (en)
[origin: EP0686575A1] The container is made from a thermoplastics strip and comprises a main compartment (12) and a secondary compartment (14), a rim (16) and a zone (18) between the two compartments which is made with a line of reduced strength (34). The rim is inscribed in a rectangle, with the two compartments aligned in one direction (D1), and the line of reduced strength in a perpendicular direction (D2). The secondary compartment is half the size of the main one, and the combined dimensions of the two compartments is equivalent to a whole divisor of the width of the thermoplastics strip. The two compartments can be made from coextruded sections of strip material with different aspects, e.g. one of them can be opaque and the other transparent. <IMAGE>
