Abstract (en)

The distributor consists of a reservoir with a distribution valve and control rod, and a push-button (4c) which transmits a pressure to the rod and has an outer ring (23a) connecting it to the reservoir. The push-button and retaining ring are made in one piece, and articulated by a joint (30) which lies in a plane (Z). The push-button and ring are also connected by a lug on the opposite side to the joint. The joint is in the shape of a diabolo with its zone of minimal section, allowing the push-button to pivot relative to the ring and actuate the valve. <IMAGE>
