Abstract (en)

The present invention relates to an apparatus for reading out optically detected characters reproduced on sheets or parts thereof, which comprises a supporting panel (3), on which can be supported the sheet element to be read-out. This panel is made of a clear material and thereunder is arranged a read-out device (5), comprising a decoding apparatus (6) facing the supporting panel and mounted on a supporting element (7) which can be driven so as to scan substantially the overall surface of the sheet supported on the supporting panel. <IMAGE>
