Abstract (en)  
Shielding arrangement between several shielded cables (20) and a connector (21), each shielded cable (20) comprising at least one conductor within a shielding (27), the arrangement comprising flexible electrically conductive, hose shaped shielding means (24) comprising a first end and a second end, which first end is electrically conductively connected to a housing of the connector (21) having at least an electrically conductive outer surface, preferably by a first clip binding (30), and which second end is electrically conductively connected to each, partly stripped shielding (27) of each shielded cable (20), preferably by a second clip binding (30), a flexible, electrically conductive tape (29) being wound around the bundled shieldings (27) by second clamping means (28; 30) in order to establish good electrical contact between all stripped shieldings (27). <IMAGE>
