Abstract (en)  
[origin: JPH0827656A] PURPOSE: To obtain a filament-reinforced nonwoven-fabric sheeting reinforced by sheets of parallel running reinforcement yarns integrated into the nonwoven- fabric sheeting. CONSTITUTION: This nonwoven-fabric sheeting comprises a binder used to vertically bind filaments A forming the nonwoven fabric to filaments B of reinforcement yarns at crossing points of the filaments A and B to each other and to vertically bind the filaments A themselves of the non-woven fabric at the crossing points of the filaments A with the same binder. No delamination is observable even in small areas of the nonwoven-fabric sheeting. Furthermore, the nonwoven-fabric sheeting has high stability at a low weight per unit area.
