Abstract (en)
[origin: EP0687762A1] A spot cleaning gun has a nozzle (3) which delivers cleaning fluid when a press button (6) in the handle (2) switches on a pump. Drying air is delivered through a tube (7) when an operation lever (8) hinged in the housing (1) is actuated. The air tube (7) is approx. parallel with a first section (4) of the supply tube to the nozzle (3). The second section (5) of the supply tube ends at the nozzle (3) and is at an angle to the air tube (7). The end of the air tube is cut at an angle to its axis (11) to form an application surface (10) for the fabric and is approx. at right angles to the axis (12) of the second section (5) of the supply tube. The press button (6) and lever (8) are placed so that the former can be operated by the index finger and the latter by the thumb of the hand holding the gun. <IMAGE>
