Abstract (en)

A method for the disposal of solid municipal waste comprises a gasification and slagging phase, a combustion phase for the combustible gases produced, with hot burnt gases being obtained, and a heating phase, using, as heating fluid for the burnt gases, air to be used in the above phases in the required amounts and at the required temperature. Furthermore, an apparatus (1) for performing the above method comprises a gasification and slagging reactor (2) in which the gasification and slagging phase occurs, a burner (18) for producing the hot burnt gases, and an exchanger (23), supplied with air by a suitable compressor (25), for heating the air to be used in the gasification and slagging and combustion phases.
