Abstract (en)

[origin: FR2721389A1] The artillery-piece has a firing mechanism with a percussion rod (12) which is able to slide axially in a housing (13), a lock (18) to hold the rod in the cocked position, and a release mechanism for the lock. It also has a slideway (19) which operates axially inside the housing. The rod can slide relative to the slideway with or against the action of a cocking spring (17), while the lock is mounted on the slideway or the rod. The firing mechanism also contains return components to hold the slideway and rod in the long firing position, comprising projections (22) inside the slideway which interact with outward projections (23) on the rod.
