Abstract (en)

[origin: US5702789A] The invention relates to a set in sheet form as well as to apparatus and a method for producing such a set, which consists of at least one information carrier in card form with carrier material lying in the same plane, wherein the information carrier and the carrier material are completely separated from one another by means of uninterrupted stamped cuts or the like and For the releasable connection of information carrier and carrier material at least one narrow adhesive strip is provided which is coated with a glue on one side, covers at least a part of the stamped cuts between adjacent rows of information carriers and/or between information carriers and carrier material and adheres the components of the set to one another. The width of the information carriers perpendicular to the course of the adhesive strip amounts to a multiple of the width of the adhesive strip.
