Abstract (en)

[origin: EP0688510A1] Device for adjusting the position of a quarter with respect to the shell of a sports shoe. The device comprises first means (1), associated with the quarter, for preselecting the desired interaction between the quarter and the shell. There are also second engagement means (32) which are associated with the shell. Finally, there are third means for interaction between the first preselection means and the second engagement means which can be activated when the quarter is moved. <IMAGE>
