Abstract (en)
[origin: DE4410003C1] The invention relates to a toothbrush (10) with a head section (13), which is at least partly movable under load during tooth-cleaning and is fitted with an interchangeable brush head (14), and a grip section (17). According to the invention, the head section (13) and the stem (15) of the toothbrush take the form of a continuous spring-steel wire with two shanks which, in the region of the stem (15), each have a spring (18) with a plurality of turns which permits movements of the head section (13) in all directions perpendicular to the longitudinal axis of the toothbrush (10) and the brush head (14) can be clamped in the head section (13) by pressing free end regions of the shanks (16) together and releasably securing them in the grip section (17).
