Abstract (en)

[origin: EP0688638A1] The miller body (11) has a bore (21), which is cut from the wall (19) of the recess (12). The bore contains a heavy type dowel pin (23). The blade (13) has a groove on the side (24), which engages on the wall. The groove is in elastic contact with the jacket surface (29) of the dowel pin. The clamp device for the clamp body (15) is formed by a screw (17), which has two threads (31,33) with opposite directions of turning. One thread meshes with a threaded hole (35) in the miller body, the other meshes with a threaded hole (37) in the clamp body. <IMAGE>
