Abstract (en)

The pack consists of a box in an oblique parallelepiped shape with rectangular lower (1) and upper (2) panels, the latter having an aperture through which the sheets can be extracted. The lower panel has an end flap (10.2) which can be set at an angle to facilitate extraction. The two sides of the box are in the shape of parallelograms, and the two ends (5,6.2) are in the form of inclined rectangles. The inclined end flap is obtained by creasing a panel which forms an extension to one end (6.2) of the box, and its angle is set by means of a lug (10.3) projecting through a slot in the box's lower panel. Once the upper panel of the box has been opened and the inclined panel is set in place, the sheets of paper have their ends inclined upwards through the aperture. <IMAGE>
