Abstract (en)

The system consists of upper (1) and lower (8) frame profile members. The lower profile has a projection (9) to engage with a recess (10) in the bottom edge of the panel (4). The upper profile has a fixing in the form of a support (2) with a vertical section and two horizontal sections (2',2'') at different levels - one fixed to the upper frame member and the other designed to receive a slider (3). The slider has a flat end (5) which is pressed against the vertical source of the wall panel and held in place by a screw coupling (6,7). When construction is completed the support, slider and fixing mechanism can be concealed by a ceiling. <IMAGE>
