Abstract (en)

[origin: EP0688922A1] The transport anchor comprises an internally threaded sleeve (13) into which the load pick-up is screwed. An externally threaded stopper (21) is screwed in to engage positively into the inner thread (14) of the sleeve. The stopper has on its outer end face the connecting member for a screw driver. These connecting members can be two faces formed by an oblong projection (28) set symmetrically on the end face of the stopper. The stopper can have a blind hole (23) with inner thread with the opening of the blind hole set on the front end side of the stopper. <IMAGE>
