Abstract (en)
[origin: WO9421849A2] A textile machine has at least one device (13) for supplying at least one thread (17) to the spot where the thread is processed. The device (23) is movable above the machine processing area. In order to obtain a textile product having a uniform colour and structure (7), even when elastic yarn is processed, a device (13) for placing the thread in readiness is movable above the machine processing area. The invention is particularly advantageous in flatbed knitting machines.
