Abstract (en)  
[origin: WO9421863A1] The invention relates to a sheeting panel with outer, parallel, spaced covering sheets (3) with a filling structure (28, 29) between them. In order to obtain a light sheeting panel with high deformation resistance it is proposed that the filling structure consist essentially of a sheet-steel strip honeycomb structure, the walls of the comb of which are perpendicular to the covering sheets (3).
