Abstract (en)  
[origin: EP0689787A1] The seat has at least one row of transverse, parallel rungs (6) is fixed by an adjustment between the bearers (1a,1b). The distance between the adjacent rungs in a row corresponds at least to the thickness of an inserted part of the elements (10,13) forming the seat. Each element is fixed to rest against at least one of the two adjacent rungs. Spaced apart from the element forming the seat is a foot-rest and or struts of another element such as play-table between two adjacent rungs. A second row of rungs can be positioned in front of the row of rungs at the back of the bearers and form abutments for the elements or struts. <IMAGE>
