Abstract (en)
The invention relates to a ship's hatch, more particularly ship's hatch of the "Frieze kap" type, characterised in that it consists of two parts, i.e. a part of which the constant height/depth of the gutters determines the height/thickness of the hatch and a part in the form of an extension (6) with a smaller height/depth of the corrugations, which is situated, in the use position, in the area of the coaming (10), and further characterised in that the upper surface (7) of the ship's hatch is connected to said extension (6) by means of an inclined plate (8). <MATH>
