Abstract (en)  
The container has a lid (20) fitting on the outer edge (18) of the open end. The lid and at least one closure part (28) are connected for articulated movement at a distance from each other. The lid which is shaped to close the open end has at least one opening (22) which can be closed by the closure part. The lid and closure part can be connected to the container or to the container and lid by connecting ribs (24). These can be wave-shaped with the longitudinal direction of the ribs running parallel to the container edge of lid edge. The container, lid and closure part can be formed in one piece of plastics. <IMAGE>

Abstract (de)  
Die Erfindung betrifft einen einseitig offenen Behälter mit einem an dem offenen Ende nach außen abstehenden Außenrand. <IMAGE>
