Abstract (en)
[origin: EP0690183A2] The edges (13) of the plates (1) contain lengthwise grooves (12), and they of flexible elastic material at least at the grooves. The frame comprises profiled bars (2,2',2''), each pair accommodating a plate between them and whose groove edges fit part-way round them, so as to lock the plate in place. The bars can be formed by hollow drum profiled sections, or of bent sheet-metal strip, typically of circular or triangular cross-section. <IMAGE>
