Abstract (en)
[origin: WO9417692A1] A combination shelving unit has a number of mutually superposed shelves (2) which are carried by a number of vertical posts (4) which, via connecting devices, are connected pairwise with one another. For carrying the shelves (2), the posts (4) are disposed along the front and rear edges of the shelves (2), and the posts (4) are provided, on their sides facing the shelves (2), with recesses (7) for accommodating edge portions of the shelves (2). The connecting devices are placed in the proximity of the shelves (2) and are designed as ties (8) with nuts (9) which pairwise draw the posts (4) into hard abutment against the shelves. The shelves (2) are provided with pressure-absorbing elements between their front and rear edges.
