Abstract (en)
[origin: WO9421465A1] An automatic cheque issuing device used as a document printer contains a device for print monitoring (GS, AE). The print monitor makes it possible to print a print monitor symbol (15) in a blank section of the document (12) when the latter is printed. This print monitor symbol (15) is scanned by means of a light barrier (26), which is used to place the documents (12) in a printing position, and checks the presence and condition of the print via a program-controlled assessment unit (AE). It is thus possible to monitor the operation of the printing mechanism of the printing device and ensure that only printed and checked documents (12) are produced by the automatic document issuing device.
