Abstract (en)
[origin: GB2285940A] The terminal portion of screwdriver blade 11 has stepped portions of successively smaller dimension towards its tip for use with any of a range of screws with different dimensions where the largest of the screws will have a complementary stepped slot to be engaged by all of the portions 12, 13, 14 of the blade, smaller screws will have a slot to be engaged by the portions 12 and 13 only, and the smallest will have a recess to be engaged by the tip portion 12 only. In other embodiments (Fig. 4) the portion of the tool may be hexagonal or of other non-circular shape and again the screws are to have complementary recesses. The invention is useful with screws, bolts and other fastening pins both threaded or non-threaded of a wide range of types, and in the case of non-threaded fasteners the tool and recess cross-section need not be non-circular.
