Abstract (en)

[origin: EP0691160A1] In the recovery of materials from refuse burning furnaces, the slag is drawn from the furnace without subsequent water quenching. The components are sepd. through screens. In the first screen particles smaller than 2 mm are discarded. The remainder is passed to a second screen in which particles smaller than 25-35 mm, are passed to a third screen, and particles above that size are passed to a fourth screen.
