Abstract (en)

A method of manufacturing a granular or tablet developing composition for a silver halide photographic light-sensitive material is disclosed which comprises the step of: granulating a developing agent to prepare first granules comprising the developing agent, granulating an alkali agent to prepare second granules comprising the alkali agent, and mixing the first granules and the second granules, wherein the content in the first granules of granules having a particle size of 1000 μm or more (JIS) is not more than 10 weight % based on the total weight of the first granules and the content in the second granules of granules having a particle size of 1000 μm or more (JIS) is not more than 10 weight % based on the total weight of the second granules.
