Abstract (en)
[origin: CA2159477A1] The invention concerns a cutting insert (10) with a negative face land (14) adjoining the cutting edges (11, 13), designed in particular for radial machining. In order to minimize the resulting overall cutting force, the width of the face land (14), relative to the effective cutting zone, is a maximum in at least one corner (12) of the cutting edge or in the region of a round feed-side cutting edge.
