Abstract (en)

[origin: WO9423249A1] A domestic air conditioning and/or heating method, particularly for apartment buildings, using an outside unit (2) and an inside unit (1) connected to one another via fluid and electrical lines (3). The outside unit (2) includes a compressor, a ventilation system and an exchanger while the inside unit (1) includes a ventilation system and an exchanger. A low pressure inside unit (1) supplies pressurised air at a pressure no higher than 8 mm and the air is bulk-fed into a false ceiling (6) forming a sealed plenum (7) which acts as a decompression chamber and comprises supply grilles (15-17) for blowing air into each of the rooms to be served.
