Abstract (en)

[origin: EP0692200A1] The system has a central dust extractor (11) receiving the extracted air from the pneumatic tobacco deposition station (12), with an individual dust extractor (20) used for cleaning the air removed from the cigarette rolling and filter insertion stations (15,18). The tobacco dust extracted by the individual dust extractor is fed via an auxiliary vent line (23) to the vent line (14) between the tobacco deposition station and the central dust extractor, the extracted dust only supplied to the latter during the pauses in the operation of the deposition station. <IMAGE>
