Abstract (en)
[origin: EP0692208A1] The drawer comprises flaps (12) with their free ends having a hole taking a fixture screw. The flaps are bent between the connecting point with the support strut (4) and the hole. The bend protrudes towards the base plate (5) on which it rests. The flaps are more rigid at the bend than at the connecting point with the support strut. Near the hole and the screw, the flaps are spaced apart from the base plate and slope towards it. At their connecting point and the support strut or between the connecting point and the hole, the flaps are cross-sectionally weaker.
